

ABSTRACT

A speaker enclosure includes a housing having a chamber formed by a front panel, a rear panel and an upper panel, to receive one or more speakers. The housing includes an opening formed in the rear panel. A flared tube is disposed outside of the housing, and includes one end attached to the opening of the rear panel of the housing, to enclose the opening of the rear panel of the housing, and to prevent dirt or bugs or insets from entering into the speaker enclosure via the opening of the rear panel of the housing. The flared tube includes a flared member to direct sound out of the housing, preferably forwardly of the housing.
